

Rahul Raj

IAM and OT Security Analyst | AI Security and Automation

Chennai, Tamil Nadu, India | +91 96296 36733 | vcrahulraj@gmail.com | github.com/vcrahulraj | vcrahulraj.github.io

Professional Summary

Identity and security analyst with nearly four years of experience in identity and access management, access governance, OT security monitoring, and security automation. Promoted from IAM Trainee to Associate Analyst at CDW. Work spans SailPoint IdentityIQ, Active Directory, Okta, Microsoft Exchange, ServiceNow, and Claroty. Created internal web and PowerShell tools that shortened monthly IAM audit reporting from roughly three to four days to a few hours and reduced employee transfer-case preparation from about 45 minutes to five minutes. Applying this operational security background to Generative AI, retrieval-augmented generation (RAG), and agentic AI portfolio projects built with Python and Streamlit, deterministic controls, prompt-injection safeguards, structured outputs, and human approval.

Core Skills

Identity and Access Management: SailPoint IdentityIQ, identity lifecycle operations, joiner-mover-leaver workflows, entitlement reviews, access governance, Active Directory, Okta, ServiceNow, distribution lists, security groups, and service accounts

OT and Security Operations: Claroty monitoring, vulnerability and alert triage, asset and service availability, connectivity monitoring, degraded network traffic analysis, escalation, and IBM QRadar SIEM

Automation and Administration: Python, PowerShell, Streamlit, Pydantic, Microsoft 365, Exchange Online, on-premises Exchange, Excel reporting, Git, Docker, Linux, and VS Code

Secure AI Engineering: Generative AI, local TF-IDF retrieval-augmented generation (RAG), agentic AI concepts, structured LLM outputs, prompt-injection defenses, deterministic guardrails, human-in-the-loop review, privacy-aware audit logging, and AI-assisted development with Codex and Claude Code

Professional Experience

Associate Analyst | CDW

Apr 2024 - Present

Chennai, Tamil Nadu, India

- Created an internal web app for monthly IAM audit reporting through AI-assisted development. It replaced a paid commercial workflow and cut the cycle from roughly three to four days to a few hours; the four-member project team now uses it.
- Turned the employee-transfer SOP into a rule-based tool that cleans SailPoint IdentityIQ exports, formats the manager Excel report, and drafts the email. Case preparation dropped from about 45 minutes to five minutes.
- Wrote a web-based PowerShell command generator for bulk shared-mailbox permissions, including Full Access, Send As, and Send on Behalf, so analysts can prepare one Exchange Management Shell script instead of handling users one by one.
- Review SailPoint entitlements for employee transfers, coordinate decisions with current and future managers, and raise ServiceNow requests when access should be removed.
- Track Claroty alerts, vulnerabilities, asset and service availability, lost connectivity, and degraded traffic, then document and route findings through email, Microsoft Teams, and Planner.

IAM Trainee | CDW

Nov 2022 - Mar 2024

Chennai, Tamil Nadu, India

- Handled identity lifecycle tasks for employee transfers and terminations, including entitlement review, manager validation, and access-removal coordination.
- Coordinated ownership changes for distribution lists, security groups, and service accounts when an employee departure left an ownership gap.
- Supported Active Directory groups and password administration, Okta password resets, Microsoft 365 licensing, and shared-mailbox and distribution-list requests through ServiceNow.

Security Analyst Intern | Sirius Computer Solutions

Jun 2022 - Nov 2022

India

- Completed a six-month SOC-focused internship covering security monitoring, IBM QRadar SIEM fundamentals, and infrastructure security basics.
- Practiced DMZ design, server setup, and router and switch configuration through lab and training projects.
- Earned the IBM Certified Analyst - Security QRadar SIEM V7.4.3 credential during the internship.

Certifications

- SailPoint Certified IdentityIQ Associate | SailPoint | Jan 2025
- Claroty Cybersecurity Analyst | Claroty | May 2025
- Claroty Implementation Engineer - IND (CIE 401) | Claroty | Dec 2025
- IBM Certified Analyst - Security QRadar SIEM V7.4.3 | Exam code C9002900 | Aug 2022

Education

Bachelor of Engineering in Computer Science | Dhirajlal Gandhi College of Technology

2017 - 2021

Salem, Tamil Nadu, India | CGPA 7.27/10

Personal AI Security Projects

AccessLens Secure IAM Access Review Copilot

Independent Portfolio Project

Python | Streamlit | Pydantic | Local TF-IDF RAG | Docker

- Developed a local-first access-review prototype for synthetic SailPoint-style identity and entitlement data, with deterministic checks for least privilege, stale access, lifecycle status, privileged access, and segregation of duties.
- Kept authorization decisions outside the LLM path while adding local policy retrieval, prompt-injection quarantine, validated outputs, manager email and report exports, and privacy-aware audit events.
- Confirmed the workflow with 11 automated tests and four of four adversarial prompt-injection evaluations. The prototype has no production connector and cannot approve, revoke, or modify access.

OT Security Alert Triage Agent

Independent Portfolio Project

Python | Streamlit | CLI | Local TF-IDF RAG | JSONL Audit Logging

- Developed an OT alert-triage prototype that turns synthetic, vendor-neutral alerts into explainable risk assessments, cited runbook evidence, response plans, and analyst escalation drafts.
- Restricted model use with deterministic scoring, full-alert prompt-injection inspection, unsafe-action filtering, HTTPS endpoint allowlisting, fallback behavior, and human approval boundaries; the tool performs no autonomous remediation.
- Tested input validation, retrieval, scoring, safeguards, audit behavior, and fallback handling with 23 automated tests across five synthetic scenarios.
